Disorder in Physical Systems

Disorder in Physical Systems

A volume in honour of

John M. Hammersley

on the occasion of his

70th birthday

Edited by

G.R. Grimmett and D.J.A. Welsh

Preface

On 21 March 1990 John Hammersley celebrates his seventieth birthday. A number of his colleagues and friends wish to pay tribute on this occasion to a mathematician whose exceptional inventiveness has greatly enriched mathematical science.

The breadth and versatility of Hammersley's interests are remarkable, doubly so in an age of increased specialisation. In a range of highly individual papers on a variety of topics, he has theorised, and posed (and solved) problems, thereby laying the foundations for many subjects currently under study. By his evident love for mathematics and an affinity for the hard problem, he has been an inspiration to many.

If one must single out one particular area where Hammersley's contribution has proved especially vital, it would probably be the study of random processes in space. He was a pioneer in this field of recognised importance, a field abounding in apparently simple questions whose resolutions usually require new ideas and methods. This area is not just a mathematician's playground, but is of fundamental importance for the understanding of physical phenomena. The principal theme of this volume reflects various aspects of Hammersley's work in the area, including disordered media, subadditivity, numerical methods, and the like.

The authors of these papers join with those unable to contribute in wishing John Hammersley many further years of fruitful mathematical activity.

Contents

Contributors ix

Speech Proposing the Toast to John Hammersley — 1 October 1987 1
David Kendall

Jakimovski Methods and Almost-Sure Convergence 5
N.H. Bingham and U. Stadtmüller

Markov Random Fields in Statistics 19
Peter Clifford

On Hammersley's Method for One-Dimensional Covering Problems 33
Cyril Domb

On a Problem of Straus 55
P. Erdős and A. Sárközy

Directed Compact Percolation II: Nodal Points, Mass Distribution, and Scaling 67
J.W. Essam and D. Tanlakishani

Critical Points, Large-Dimensionality Expansions, and the Ising Spin Glass 87
Michael E. Fisher and Rajiv R.P. Singh

Bistability in Communication Networks 113
R.J. Gibbens, P.J. Hunt, and F.P. Kelly

A Quantal Hypothesis for Hadrons and the Judging of Physical Numerology 129
I.J. Good

Percolation in $\infty + 1$ Dimensions 167
G.R. Grimmett and C.M. Newman

Monte Carlo Methods Applied to Quantum-Mechanical Order-Disorder Phenomena in Crystals 191
D.C. Handscomb

The Diffusion of Euclidean Shape 203
Wilfred S. Kendall

Asymptotics in High Dimensions for Percolation 219
Harry Kesten

Some Random Collections of Finite Subsets 241
J.F.C. Kingman

Probabilistic Analysis of Tree Search 249
C.J.H. McDiarmid

Probability Densities for Some One-Dimensional Problems in Statistical Mechanics 261
J.S. Rowlinson

Seedlings in the Theory of Shortest Paths 277
J. Michael Steele

The Computational Complexity of Some Classical Problems from Statistical Physics 307
D.J.A. Welsh

Lattice Animals: Rigorous Results and Wild Guesses 323
S.G. Whittington and C.E. Soteros

Fields and Flows on Random Graphs 337
P. Whittle

Bond Percolation Critical Probability Bounds for the Kagomé Lattice by a Substitution Method 349
John C. Wierman

Brownian Motion and the Riemann Zeta-Function 361
David Williams

Index 373
